Spend 30 minutes with NASA Langley Research Center Educators talking about challenges related to eating in space and then participate in a Q&A to ask your questions. Discussion topics will include:

“How do you supply food for a crew of four people for a journey that could take 1,000 days?”

“Can you grow food in space? What do you need in order to do it? What foods can you grow?”

“How much food does an astronaut need to eat?”

“What’s the problem with fruit?”

“What do you do with food waste?”
